

Guilherme Martins

Guilherme Martins received the Master Sciences in Mesoscale Meteorology from the Federal University of Pelotas, Brazil. He is assistant research and doctoral student in Center for the Earth System Science/National Institute for Space Research (CCST/INPE), where he is currently involved in a project with INPE and Oswaldo Cruz Foundation (FIOCRUZ). In his doctorate research intends to evaluate the impact of biomass burning aerosols on the seasonal climate forecast with a focus on South America, and verify its impacts on the quality air using the newest version of the General Atmospheric Circulation Model (GCM) of the Center for Weather Forecast and Climate Studies (CPTEC).
