

Juan Rivera

Juan Rivera received a M.Sc. in Atmospheric Sciences from the University of Buenos Aires, Argentina. He is currently involved in a Doctoral research at the same institute in Buenos Aires, with a scholarship from the National Scientific Research Council. The main objective of his research is to improve the knowledge of the spatial and temporal variability of the occurrence of drought events in South-eastern South America and to investigate the physical processes involved in them. He is involved in several research projects which analyze the rainfall variability and its consequences over La Plata Basin, focusing on drought events.
